## Summary

I am an aspiring software developer, currently studying Bachelor's in Informatics (Computer Science) at Masaryk University, Brno.

Apart from informatics, I've also attended FIRST Lego League competitions, that focus on building robots from LEGO, fulfilling tasks, but also presenting a research project. I've also been chosen as a team member of Team Slovakia in FIRST Global Challenge 2018 held in Mexico City. My main role was being the team's spokesperson (in English), which required great presentation skills. However, I've also built parts of our robot, wrote some small modules of code and contributed to testing it.

My other work experience is quite varied. I've built a presentation website for a local CNC machining company, which I also maintain to this day. I've worked as an e-shop maintainer for a local music store. I've also worked as a plumber and a supporting bricklayer. I've led an after school Lego building club for primary school pupils.

My current focus is Rust Programming language and building web apps.
